Graduation Project Mid-Term Submission

Purpose of the project:

Foreign touristsand domestic tourists build a structure in which they can obtain all the data from a single site when touring the cities of Turkey. Developing an android application for mobile phones, which will be most used during travel.

Technologies to be used in the project;

Android Studio, Java Program Language

There will be a list of 81 provinces in the main menu, a provincial detail page that will be opened privately with each.

City name, city plate code, city description, city images, parameters will be collected in one class, this class will be provided to be a city.

There will be images of each city and text fields.

The license plate code of each city will need to be written on the city detail page.

The necessary tests will be carried out in the emulator and the elimination of errors.

Since the start of our spring period, I decided for which platform and what tools to develop this project, then I created a project on the IDE by detailing my idea. I started working to bring my ideas to life by doing research on anroid application development!
